

*Patches all the Way Down...*

# Wrapping up *Mocks 101*

- **Mocks:**
  - ...make it easier to **unit test** not only code that might require a **stub of a dependency**...
  - ...but also **behavior** if/how things were called
- **Patching is awesome.**
- *Try to only patch/mock things you own and control.*

- **Mocks** are not unique to Python!
