Example 3 - Patch it like it's Hot 🔥

- THE MOST USEFUL (imho) FEATURE from the Mock module

- Let's you use decorators to easily patch stuff under the covers

- **Seriously, this is extremely powerful and useful and does the hard hand-wiring for you!!!**

Example 3 - Patch it like it's Hot 🔥

- **Super simple example:** *patch a function with a stub*

```python
@patch('btvpython.alexa.get_next_meetup', return_value={})
def test_no_meeting_response(mock):
    response = alexa.handle_intent(alexa.NEXT_EVENT_INTENT)
    assert 'Sorry, I could not find an upcoming event' in response
```

- **NOTE:** *Always patch the object/call WHERE IT IS USED!*
